xml

text

Parent Controller Pattern
JIS Express / Kestrel

HTTP Pipeline -

"/Home/Index"
pattern

Routing

Routing

Middleware : IF
pattern
matches

Table

name:	pattern:
"default"	/controller/action/{id?}
"bvs"	bvs: /controller/action/unn/pwd

if URL pattern matches

Dependency Injection Container
[DI Container]

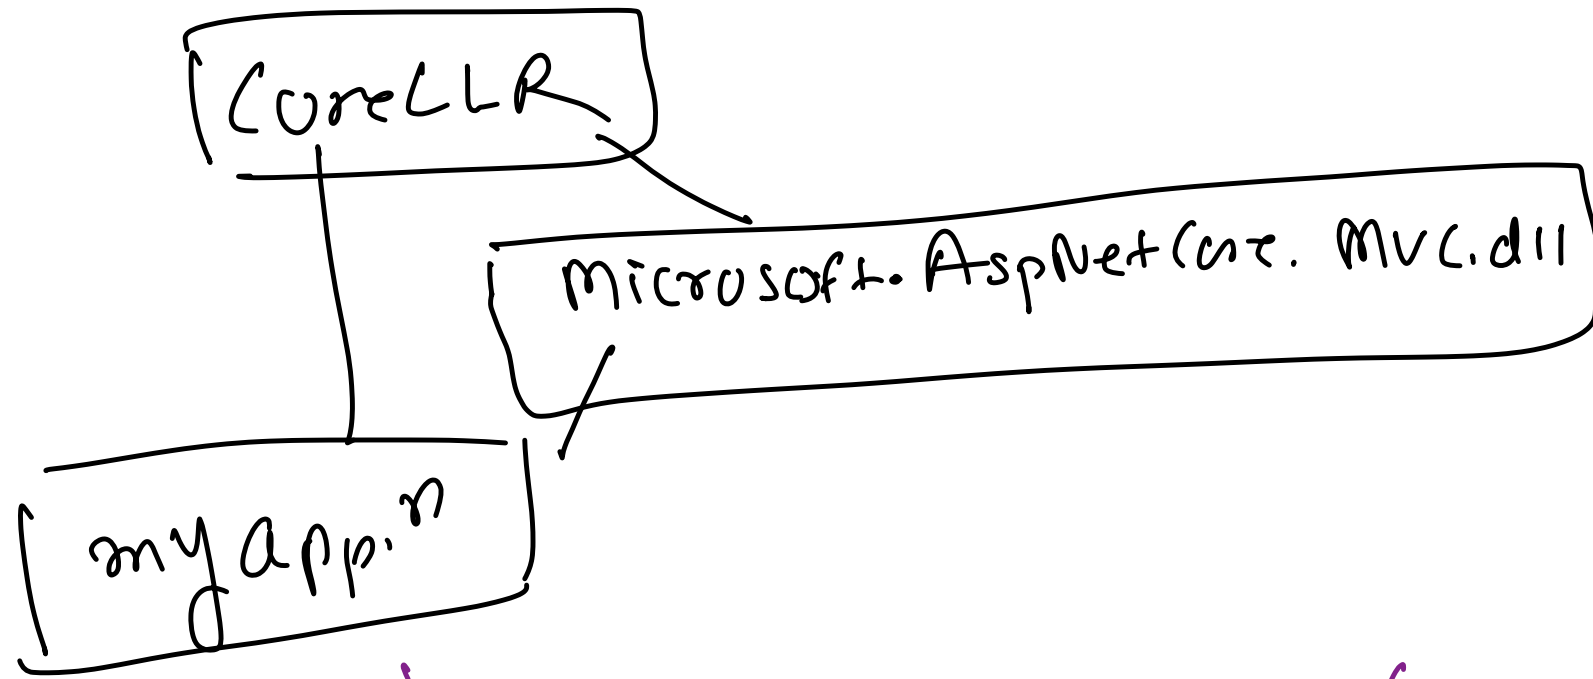

- dependency : Controller Class

- dependency : views

URL split : "/Home/Index"
= "Home" + "Controller"

["controller" = "HomeController",
"action" = "Index",
"id!" = "0"]

Application Life Cycle

Reflection :-
dynamic obj = asm.CreateInstance(
type.Name)

ControllerFactory factory = new

ControllerFactory("HomeController");

IController ctrlle = factory.GetController();

. { Execute Member ()
 . Invoke (
 "Index") { }
 View ("Index") { }
 ↓
 (C# + HTML)
 " path: Views / Home /
 Index.cshtml"

View Engine Factory

factory = new View Engine Factory ();

View Engine = factory . GetView Engine ("Razor")

obj → class Razor View Engine

try. Render ()
1 search reflection: index.shtml
" / views / home / " →
make a blend of c++
& html and emit /
3 generate output as
plain HTML
