Old .NET :- OS : Windows.

FCL → BCL

- System.dll
- System.Data.dll
- System.Xml.dll

: bin \ Debug \ Demo.exe → actual app.ⁿ

.NET Core :- OS : Windows, Linux, macOS

: bin \ Debug \ .NET8.0 \ Demo.dll → actual app.ⁿ.

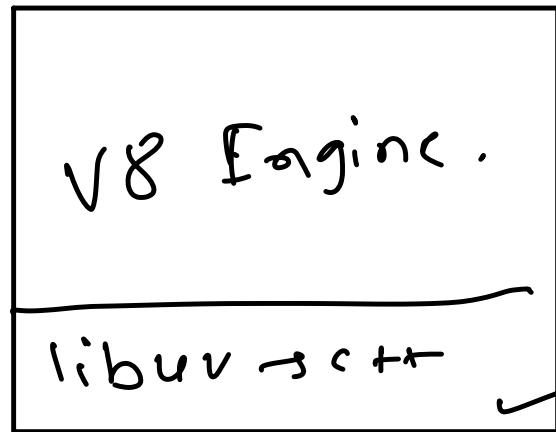

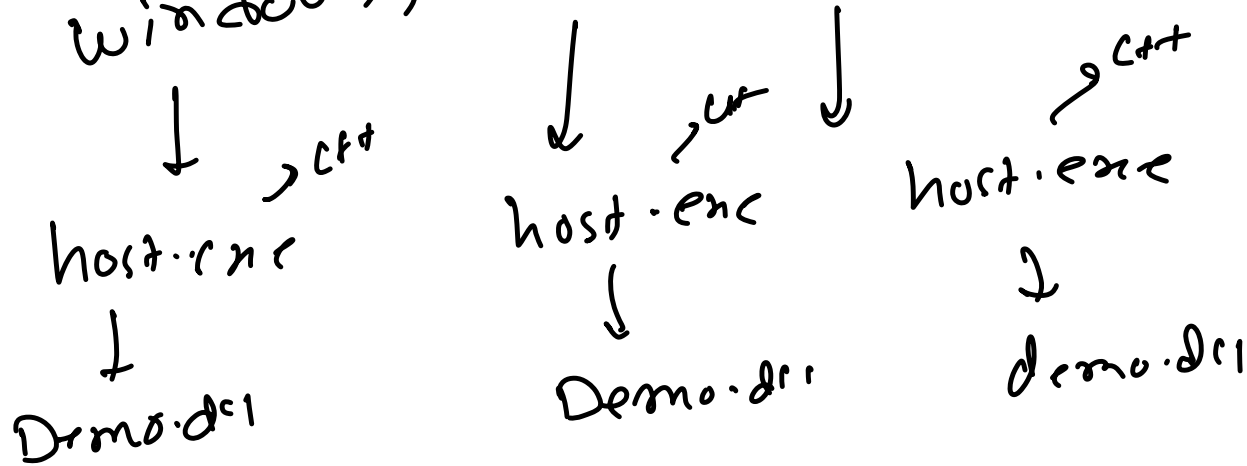

bin \ Debug \ .NET8.0 \ Demo.exe → Host Appl.ⁿ.

No BCL concept exist in .Net Core

• Net Core

Open-source

Windows, Linux, macOS

node.exe

C++

Old .NET

OS: Windows

CAC / BCL / shared assembly

Normal JIT compiler

.exe

hidden source code

C#, VB, F#

FW 1.0 → 4.8

mscorlib.dll

desktop app.
NO CLI apps

.NET Core

OS: Windows, Linux, macOS

NO GAC concept / NO BCL
NO shared Assembly concept

Ry4 JIT compiler

.exe + .dll

open-source

Roslyn > F#

8.0 →

System.Private.CoreCLR.dll

No desktop app.
CLI apps.

namespace : logical grouping of entities.

namespace

- 01 Demo

↳ class

Program

↳

main()

string PName = "Rob"

↳

class

Person

↳ GetDetails()

↳ string PName = "Tom"

- 01 Demo Person. PName = "Tom";

- 01 Demo. Person

- 01 Demo. Person. GetDetails

System. Console.WriteLine("Hi");

fully Qualified Names
